# CASE STUDIES

# JÄGERMEISTER GALAXY HUNTER

We designed and developed the advergame for Jägermeister that runs in a old arcade machine with the synth sounds of musician of Nightcrawler and the artist called Voltron.

# HOLOGRAPHIC ARDBEG WHISKY TASTING

We developed the first holographic whisky tasting presented by the expert Xavier Monclus using Microsoft HoloLens headset with interactable 3D content and 360° video with spatial audio.

MoëtHennessy

# WWF FREE RIVERS

We created this app that leverages the power of the ARkit to teach the negative effects of dams in the environment.

Developed in collaboration with Apple and Unity Technologies.

Ocean water evaporates into clouds, which fall as rain. As rainwater flows over the landscape, it collects important nutrients and small pieces of sand, silt, clay and other natural materials (known as sediment).

The enriched water then flows into underground aquifers and rivers where it is carried downstream on a journey back to the ocean. The entire landscape that drains into a river is called a basin.
